

Title:

gLite Introduction Course

Author:

Manuel Zeise, KIT

Abstract:

The course gives an introduction to the basic concepts of the grid and the gLite middleware. After a short explanation of authentication and authorisation on the grid and the workflow of a simple job, the participants submit their first job to the grid. In the following, the storage of data and the access to it is explained. Based on this, the participants learn advanced grid job submission techniques. The course concludes with an exemplary grid job that combines all tools and techniques presented before.
